

Crew Planning

The Adonis Crew Planning module contains a comprehensive and very powerful tool which provides a graphical approach to crew planning. Most of all; its user-friendliness and flexibility are turning traditional cumbersome and time-consuming tasks into pure pleasure for crew managers. "Drag and drop" functionality, various views with instantly updating graphics, limitless zooming in/out of time perspectives and easy switching between vessels, departments and ranks all contribute to an integrated graphical crew planning tool the likes of which we are sure you have never seen in any crew management program before.

- Automatic search for sufficiently qualified crew currently available for a position
- "Drag and drop" from the database to the planning screen
- Change planning directly from the planning screen
- Graphical expiry Indicators on/off switch
- Floating, limitless calendar
- Zoom calendar in and out Instant refresh

Crew Planning

Features

Organisation Outline available for instant switching between vessels, departments and positions. Switch it off to allocate more space for the graphics.

By clicking on the tabs, the graphical view will change from showing all activities to showing sailing plans, crew change plans, planned courses, people on sick leave etc. Built-in drag and drop functionality makes the job a pleasure.

By manipulating the organisation outline, you can instantly switch between various groups of crew, e.g. all Masters in a pool, the "top four" ranks in a pool or across the fleet, or even the complete crew of one or several vessels.

To make more space for the graphical bars, the selection module at the top can be turned on and off as you wish. In the same way can opt for the colour legend to be switched on/off.

Depending on the type of graphic, the bar may contain the text of the activity, the name of the crew member or the name of the vessel.

Overlapping activities are shown by arrows at the end of the bars.

Edit the activities by dragging the bars or open the activity record directly.

Set the colours by your own choice from the Windows palette.

Export the graphical charts to file.

The built-in graphical Crew Planning gives you full control with the recourses at the tip of your finger.
